Abstract (en)

[origin: EP0120326A2] The hot water tank consists of a cylindrical container with domestic water inlet and outlet connecting pipes and also of a tubular heat exchanger in the form of a coil arranged in the inner space of the container, which has forward and return run connecting pipes which extend through the container wall in a liquidproof manner. The coil (6) of the heat exchanger (1) arranged in the lower half of (2) of the storage tank (4) is designed to follow the peripheral contour of at least one adjacent container wall. In horizontal projection, at least a part section of the coil (6) runs in the area of the horizontal projection (14). <IMAGE>
