Abstract (en)
[origin: EP0120653A2] A flashing 10 has a front portion 12 shaped to overlie a corrugated roof, and an upstanding rear portion 16 for attachment to a wall. They are connected hingedly, so the flashing can adapt to any roof/wall angle. Preferably the flashing 10 is a unitary plastics moulding with a line of weakness 14 constituting a resilient hinge so that the portions 12,16 are urged against roof and wall.
