Abstract (en)

[origin: EP0121637A1] 1. Straight electrical terminal connector assembly of the type comprising a crimping branch (1) ensuring electrical connection with a conductor, and a substantially tubular branch (4) forming socket extending axially from the crimping branch and comprising an opening (5) for engaging terminal (6) into the branch at least according to a substantially radial direction, means (7) being provided for elastic locking and electrical connection with the terminal, characterized in that the said locking means comprise : - two lips (18) formed by the wall of the connecting branch (4) and defining the longitudinal edges (19) of an opening (5) which extends as far as the open end (13) of the branch, - two bosses (20) projecting on the inner face of each of said lips (18), and facing one another in pairs.
