Abstract (en)  
[origin: US4581284A] A fiber compound material of individual layers of superposed fiber plies such as glass fiber prepgs which are joined together by a matrix of a resin and a hardener and act as a load carrying structure to absorb electromagnetic waves. Radar beam-absorbing fillers, for instance iron powder or soot, are included, in concentrations varying from the outside to the inside, in the individual plies of the fiber compound material.
