Abstract (en)

[origin: EP0121749A2] 1. Heating and thermal apparatus, consisting of a container which is surrounded by thermal insulation and is arranged in an enveloping housing (6, 105), characterized in that the walls of the enveloping housing (6, 105) adjacent to the ends of the container (3, 100) which is mounted with its longitudinal axis in the horizontal direction are provided with access openings and these openings are fitted with heat-insulating support rings (7, 8, 109) of suitable size and the container is mounted in the support rings (7, 8, 109) in the region of the ends of the container by means of projections, the circumference of which is the same as or smaller than the container wall.
