Abstract (en)  
1. A multi-part lifting device which can be detachably brought into engagement with a connecting element (9) dependent from a lifting apparatus and which lifting device can be screwed to a solid body (1) to be transported, by a cap screw (4), in which the cap screw passes loosely through a pressure disc (8) which is supported on the body, a supporting sleeve (7) which is adjacent to said pressure disc, and a support (6) which is clamped between said sleeve and the screw head (4a) and holds all the parts together, characterized in that at its periphery, the sleeve (7) can be brought directly into engagement with the connecting element (9) and the support (6) is formed as a safety member for the connecting element which protrudes beyond the sleeve transversely to the longitudinal axis of the screw.

Abstract (de)  
Die schraubbare Anhebevorrichtung ist mehrteilig ausgeführt und besteht aus einer in den Körper (1) eingeschraubten, vorstehenden Kopfschraube (4) sowie einer von dieser durchdrungenen Druckscheibe (8) und einem an dieser anliegenden Tragrohr (7) für ein einhängbares Verbindungsglied (9) sowie einem über das Tragrohr seitlich vorstehenden Sicherungsteil (6), das sich am Schraubenkopf (4A) abstützt und quer zur Schraubenlängsachse gerichtet ist.
