Abstract (en)

[origin: EP0121922A2] 1. Building facing, in particular as roof covering or facade facing with a first layer of supports (a), which are arranged at a distance from each other and are connected with the building, and with a second layer of supports (5), which are arranged at a distance from each other and are aligned substantially transversely to the supports (4) of the first layer and with which an outer skin (7) is connected, in which the supports (4) of the first layer are connected together with the supports (5) of the second layer at their respective points of intersection (6) in each case so as to be displaceable, characterized in that a push connector (11) is provided, which permits a free extension of the two intersecting supports in their longitudinal direction and that the first layer of the supports (4) is connected on its side facing the building with a closed inner covering (3), and that the space between the inner covering (3) and outer skin (7) is filled with an insulating material.
