Abstract (en)  
A cylindrical, rotary drying drum (10), which is adapted to rotate about its horizontally disposed longitudinal axis (14) is equipped with a plurality of spoiler bars (12) mounted to its inner peripheral surface (20). The spoiler bars (12) extend coaxially with the axis of rotation and are circumferentially spaced from one another according to the expression  $S = \pi \sqrt{2} R h$  ( $1.50 \pm 0.25$ ) and have a height  $H$  in cm determined by the expression  $H = @ (1.0 \pm 0.25)$  where  $R$  is the radius of the drum's inner surface,  $h$  is the condensate (16) thickness, and  $N$  is the number of spoiler bars mounted within the dryer drum.
