Abstract (en)
[origin: EP0122421A2] The moulded plaster lath is formed from a support profile provided with at least one fastening leg, and a complementary profile possessing a drawing-off edge, which are positively connected to one another, at least in sections, in the lath longitudinal direction by means of a plug-in type connection. This plug-in type connection consists of a U-shaped longitudinal groove extending in the lath longitudinal direction in one of the profiles, and of a connecting section, adapted to the said groove, of the other part in the form of a lath strip which engages in the longitudinal groove. <IMAGE>
