Abstract (en)

[origin: EP0123876A1] 1. Device for smoothing a layer of pasty fine ceramic material applied on a continuously moving solid carrier, characterised by at least one smoothing roller (7) having a smoothly polished corrosion-resistant surface (6), which roller is positioned on a carrier roller (8) driving it and made of rubber at least on its surface (9), is indirectly pivotally suspended round its axis (10) and can be brought forward onto the surface of the layer (4) to be smoothed and receives a liquid film transferred from the carrier roller (8) and applied onto this by means of a spraying device (12).
