Abstract (en)

[origin: ES8503817A1] In a feed water preheater of horizontal type with an integrated desuperheater, the last deflection chamber of the desuperheater is provided with lateral steam outlet ports (13). As a result, the desuperheated steam does not reach the condensation zone directly as hitherto by passing into the free cross-section of the tube bundle but, instead, it passes into the free space surrounding the condensation bundle (2) on which it can then act from the outside inwards at minimum flow velocity.

Abstract (de)

Bei einem Speisewasservorwärmer der liegenden Bauart mit integriertem Enthitzer ist die letzte Umlenkkammer des Enthitzers mit seitlichen Dampfaustrittsöffnungen (13) versehen. Hierdurch gelangt in die Kondensationszone der enthiitzte Dampf nicht wie bisher direkt in den freien Querschnitt des Rohrbündels, sondern in den freien Raum um das Kondensationsbündel (2) herum, welches er dann mit minimaler Strömungsgeschwindigkeit von aussen nach innen beaufschlagen kann.
