Abstract (en)

The invention relates to a frame (1) for an automatic printer, composed of an intermediate part (2), which is connected on both sides with end parts (3), wherein a platen is rotatably mounted at both its ends. According to the invention the end parts (3) are die-castings from artificial material, wherein the platen is directly journaled, whilst the intermediate part (2) consists of an extruded section, which comprises a base plate (5) with at least two upstanding flanges (6), the end parts (3) being connected to two of the upstanding flanges (16).
