Abstract (en)

[origin: WO8401997A1] A device for mounting claymore mines on an upstanding support at a selected elevation and angle above the ground, comprising a mounting member having a pair of channel members (1-2) hinged together near a first end by a pivot member to allow the channel members (1-2) to be outwardly displaced by a limited amount at their free end and including a brace (7) hinged to the pivot member to be displaceable to form a tripod with the outwardly displaced channel members (1-2) and flexible holding means (29) on the channel members (1-2) to encircle the upstanding support (30), the channel members having apertures (22-23) to receive the mounting spikes (18-19) of the claymore mine.
