Abstract (en)
[origin: EP0124784A2] The device (11) is equipped with a holder (21) for the workpieces (12) which accommodates an operating head and can be moved by two guides (26, 31), extending perpendicular to each other, in a preferably horizontal X-Y plane and/or in a Z-direction which is perpendicular thereto, preferably vertical, by means in each case of a stepping motor (28, 33). In order to make a device (11) of this type usable in conjunction with components of already existing older marking apparatuses, it is designed to be fixable to the upper part (13) of a machine frame (14) of a pantograph machine, engraving machine and/or drill. <IMAGE>
