Abstract (en)

[origin: WO8401908A1] A combination interactive video and surface projectile game having novel transitional play features for transferring game play and earned bonuses between the video (140) and surface projectile (120) phases of the combination game. In one embodiment, game play during the surface projectile game (120) phase affects the display presentation and play options during the video game phase. Alternation between the surface projectile game (120) and video game (140) phases of the combination game, in turn, can affect the future game play, including the retention or loss of bonus options and player benefit characters.
