Abstract (en)
[origin: US4569095A] A safety belt system for a patient stretcher (1) comprises an upper belt loop (6) which surrounds the lying surface (1d) of the stretcher in the patient's shoulder region, also a lower belt loop (3) which surrounds the lying surface (1d) in the region of the patient's feet. Two shoulder belts (8a,8b) are each secured at one end to the upper belt loop (6) and at their other end are connected via a quick-action fastening (12, 13) to the lower belt loop (3). The belt loops (3, 6) consist at least partly of elastically stretchable material and hold around the lying surface (1d) of the stretcher because of their elasticity, so that the safety belt system can be used in all normal stretchers and independently of whether there is an overlay lying on the stretcher or not.
