Abstract (en)  
Connector plug (2) installed on the end of a shielded cable (4) has a shielding enclosure (26) in surrounding relationship to the plug housing (14). The shielding enclosure (26) has an internal cable ferrule (36, 38) into which the cable (4) extends. The shielding material (8), which is a metallized film, is reversely folded (48) and has a first section (52) which extends away from the plug housing (14) and is between the internal surface of the cable ferrule (36, 38) and the surface of the sheath (10) on the cable (4). At the outer end of the cable ferrule, the shielding (8) is reversely folded (54) and has a second section (56) which extends over the external surface of the cable ferrule (36, 38). A crimped sleeve (58) is provided in surrounding relationship to the cable ferrule (36, 38) and clamps the shielding (8) to the cable ferrule to secure an electrical connection. The sleeve (58) extends beyond the cable ferrule and is also crimped onto the cable (4) to provide a strain relief.
