Abstract (en)
[origin: WO8404513A1] In an external container (1) of the conventional aerosol type containing one of the components of the product to be obtained, a smaller internal container (13) is arranged which contains the propulsion gas and the second component of the product to be obtained. The internal container (13) is arranged upside down and its valve (12) may be actuated from the outside by a pressure exerted on a deformable plug (8) arranged at the bottom of the external container, the container (13) being held by a strut (14) which is preferably integral with the valve (2) of the external container (1).
