Abstract (en)

[origin: EP0126027A1] The device consists of a circular plastic plate (1) exhibiting a flange (1 min) that is inserted in a complementary circular seat (3) of the helmet cover (2) which is also plastic. The bridge 1 sec , which holds the chin strap (7), is solid with the plate. The plate is inserted from the outside of the cover (2) (in the direction of arrow 8) and can rotate around its axis to allow angular orientation of the strap (7) in the most suitable position at the time of the fastening of the strap under the chin. An elastically deformable peripheral projection (1'') holds the plate (1) in the helmet cover.
