Abstract (en)

[origin: WO8402218A1] Device enabling the tensioning of strings and the securing of a neck thereunder. It offers the possibility of obtaining a neck free of mechanical strains by means of outer supports. This neck may therefore have a very slim configuration, thereby facilitating the play of beginners, perfecters and virtuosos. The device according to the invention is comprised of a lateral support (1), another lateral support (3), a fixed or removable tempered or untempered neck (2), a string support or head (4), another string support or body (5) and strings (6) tensioned according to known methods. The device according to the invention is particularly intended to improve the existing stringed and neck instruments such as guitars, mandolins, bangos, violins, and the like, and to show the way to create new instruments.
