Abstract (en)

[origin: EP0126173A1] 1. Apertured conical tail for a projectile, particularly a practice projectile, with a number of channels positioned in a conical body (1) and extending in a generally axial direction characterized by the fact that the cone comprises a base (1) in which, starting from the conical shell, substantially paraxial depressions (5) are provided which extend generally in the direction of the axis of the cone, the basic cone body (1) having a ring (6) which covers the depressions (5) over part of their length and completes the conical shape of the basic cone body (1), the basic cone body (1) having a step (8) which extends in the peripheral direction and against which bears a step (7) situated in the interior of the ring (6).
