Abstract (en)

The engagement assembly for ski binding application comprises a rod-like (1) element associable with a ski (3) for oscillation about an axis extending substantially parallel to the plane containing the ski (3) and substantially perpendicular to the ski length direction. The assembly comprises also means of engagement (5, 6, 7) with the skier's leg and elastic means (10) elastically holding the rod-like element (1) in contact with a back region of the skier's leg and having an elongate element of elastically changeable length. The elastic means (10) is removable and extends between a bracket (20) attached to the rod-like element (1) near the top end thereof and a pin (52) offset with respect to the oscillation axis of the rod-like element (1).
