Abstract (en)
The present invention concerns a container-dispenser of sanitary towels, particularly suitable to be used with towels of the type imbued with disinfectant deodorizing and/or detergent substances. The container-dispenser according to the invention is characterized by the fact of comprising a fence in correspondence to the wall near the first towel of the pile and means to push the pile against said wall, substantially acting on the part of the pile which is aligned with the fence and by the fact that each towel is folded with its edges offset to each other so that one edge is in correspondence to the fence and the other edge is held by the fence itself. Main advantages of the container-dispenser according to the invention are to allow easy and safe removal of the towels and to limit to the utmost evaporation of the volatile substances contained in the damp towels.
