Abstract (en)  
[origin: EP0126440A2] 1. A process of producing a folding box comprising a box cutout (10) having a pre-punched extraction opening area (100) that can be torn open and an inside lining (9) having a corresponding impressed window opening area (106), with glued connections between the box cutout (10) and the inside lining (9), in which the pre-punched box cutouts (10) are delivered in succession, provided with an adhesive coating and then brought together with and stuck to simultaneously delivered pieces of lining foil that are delivered in the form of a foil tube and provided with impressions that form the window openings, characterised in that the lining foil (9) is delivered in the form of a flattened tube (1) and one side of the tube is impressed to form the window opening area (106).
