Abstract (en)
[origin: EP0126693A1] 1. Support plate for an electronic detector placed along a railway track rail, having the shape of a reversed L comprising a rectangular plate approximately perpendicular to a holding spline engaging in a clamping clip of a support fixed to the rail, characterised in that it is produced in a single piece in composite stratified material in which the width of the spline (1) is equal to approximately half the length of the plate (2), the lower face of the plate (2) is connected to the inner face (5) of the spline by a rounded surface, and the plate extends beyond the medial plane (9) of the spline (1) by a distance equal to 1/20 to 1/5 of its width.
