Abstract (en)

A multiwall bag having an interior plastic pouch (10) formed from a sealed plastic tube having a longitudinal seam (50) comprising overlapping tube margins (54, 56) sealed together by two spaced seals (60, 62) to provide a channel (66), one of the tube margins being formed with openings (58) providing communication between the interior of the tube and the channel to permit escape of air from the tube. A strip of materials (52) is disposed along the length of the channel to prevent the overlapping tube margins (54, 56) from adhering to each other between the spaced seals (60, 62).
