Abstract (en)
[origin: EP0127798A2] A method for making baskets for freezer appliances, in which two mutually intersecting groups of metal wires are welded to each other to form a planar grid (8). with said wires (6, 7) projecting the sides thereof by a certain length. A metal rod member (9) is welded to the ends of the wires projecting beyodn any of the sides of the grid. The projecting wires are subsequently bent so that the ends of the rod members cooperate with one another to form an upper peripheral frame of the basket, the latter having been subjected to a plastic coating treatment prior to the bending of the projecting wires.
