Abstract (en)

[origin: EP0127889A2] 1. A handle for a steam iron having in its leading portion a hollow space closed by a removable end cap, in which hollow space an electric switch is arranged, which is actuated from the outside, characterized by the following features: a) starting from the edge of the opening in the leading portion of the handle closed by the end cap (2), in the handle wall (9) closing the hollow space (1) from the outside an oblong recess (12) extending in the longitudinal direction of the handle is provided; b) said recess (12) is completely closed by an oblong switch key (13) lossely inserted into said recess (12); c) said switch key (13) is secured in said recess (12) of said handle wall (9) by the fact that it is connected with said end cap (2) at its leading end by a tongue and groove connection (18, 19) parallel to the edge (14) of the opening of the handle closed by said end cap (2), that, as for the rest, it has a thin, elastic lip (17) encircling said switch key (13) and being aligned with the upper side of said switch key (13), said lip being supported on the outside of the edge of said recess (12) of said handle wall (9), and that said switch key (13) has a projection (20) supporting the edge of said recess (12) of said handle wall (9) at its trailing end.
