Abstract (en)

[origin: EP0128070A1] 1. An apparatus such as a washing machine or a dish washer, equipped with a universal container (9, 10) for powdery, liquid or paste-like products operating with a stream of water for discharging said products and with dispensing via a spillway, characterised in that the apparatus comprises in combination in said product container (9, 10) at least one barrier (22, 23) for retaining the products within the container, a deflector plate (40, 41) and a siphon device (42, 43) which are disposed in the path of the flow of discharge water produced by a jet of water (32, 33) and which permit said product container to accommodate all powdery, paste-like or liquid clothes-washing and dish-washing agents regardless of their degree of viscosity and which cause discharge of these products by simultaneous dispensing via the spillway across the barrier (22, 23) and by discharge through the siphon device (42, 43).
