Abstract (en)
[origin: US4585250A] A release ski binding having a sole plate which is pivotal in its central region about a generally vertical axis and can be forwardly pivoted about a transverse axle which is arranged in front of the vertical axle, which sole plate is held in the skiing position by a resilient holding mechanism which, during a release, effects an opening of the elements which hold the ski shoe to the ski. In order to create a simple and reliable construction of the binding, a stepping bar, which is under the influence of an erecting spring, is supported on the sole plate, which stepping bar during a stepping down procedure, moves the elements into the ski boot clamping position.
