Abstract (en)

[origin: US4588480A] A method of producing a wear protection coating on a surface of a structural part of titanium or a titanium base alloy comprising applying a metallic nickel layer which adheres to the surface of the structural part and thereafter subjecting the thus coated structural part to a heat treatment to form diffusion layers of Ti<sub>2</sub>Ni and TiNi<sub>3</sub> between the titanium and the nickel. Thereafter, the layer of nickel alone or with the layer of TiNi<sub>3</sub> is removed to leave the titanium part covered by a protection layer of the remaining diffusion layer.
