Abstract (en)
[origin: EP0128996A2] 1. Barrel weapon, capable of elevation and traversing, in both a lower and an upper angular range, with a cradle (12) a counter-recoil device (14), preferably a breech block closure block (68) and a gun carriage (16) having ground legs (18l, 18r) with three ground support zones (24, 26, 28) of which one (24) has a rod system (22) adjustable for main elevation while the other two (26, 28) are associated with the ground legs (18l, 18r) characterised by the fact that after the telescopic rod system (22) has been actuated, an angle (54) between the ground leg axis (20) at the time and the surface of the ground (52) changes in accordance with the main elevation, fine elevation of the barrel (10) in relation to the ground leg axes (20l, 20r) being provided with a fine elevation axis (46) passing through a centre of gravity (70) of the barrel system.
