Abstract (en)
[origin: ES280157U] A folding box blank, and a box assembled therefrom, having an integral carrying handle flap comprised of three segments with a griphole means passing through two of the segments. Relief embossings are located on all four side wall flaps and pairs of complementary cutouts are located on one of the upper and one of the lower remaining wall flaps, so that when the box is assembled the cutouts interact with the embossing by biasing against them.
