Abstract (en)

[origin: EP0129812A2] The object is to guide and brake the weft yarn which - at the moment of its insertion into the carrying gripper of a shuttleless weaving loom - passes through the cutting device to be cut. The said guiding and braking are obtained by means of a resilient elastic lamina 2, which is mounted on the cutting device and which presses onto the counterblade 1 of said device with a length 4 apt to mate with said counterblade 1.
