Abstract (en)

[origin: ES8503434A1] The munition comprises a munition body (100) which may enclose an anti-tank mine a cover (200) for the munition body and constituting a support for a plurality of ejectable charges (300-305), e.g. anti-personnel mines. The munition is placed or scattered on the ground while it is in the closed position. Thereafter it opens, the anti-tank mine is activated, and the anti-personnel mines are ejected in a cluster around the anti-tank mine, whereby a plurality of identical munitions may be laid to set up a combined anti-tank and anti-personnel barrage.
