Abstract (en)

[origin: EP0130145A1] 1. A releasable connection for wooden beams (1) comprising at least one fixing plate (2) which engages into a slot (3) at the end (4) of a beam and which is secured in position by means of fixing elements (5) which pass through the fixing plate, characterised in that the part (6) which is to be connected to the end (4) of the beam has at least one connecting portion (7) which partially overlaps the fixing plate (2), that the connecting portion and the fixing plate each have at least one respective mutually aligned bore (8) extending substantially transversely with respect to the plane of the fixing plate, and that a connecting pin (9) is inserted in the aligned bores.
