Abstract (en)

[origin: US4652469A] The invention concerns the use of working bodies of low density in vibratory abrasive finishing machines for the smoothing of articles of wood, particularly articles of furniture, between the undercoating and varnishing thereof. The working bodies have either the shape of angular resin-free wooden pins of a size of 4x4x30 mm and an average Shore A hardness of about 95 DEG to 100 DEG or a flat base opposite which there is a head surface corresponding to the shape of a spherical segment.
