Abstract (en)

[origin: EP0200164A1] 1. Apparatus for the mixing and spraying of a mixture composed of at least two components (A, B), for example liquids, and a propellant gas (T), consisting of two containers (10, 12), arranged one inside the other, for receiving the components (A, B) to be mixed and the propellant gas (T) and of a dispensing valve (14), arranged on the outer container (10) and comprising a valve body (18) and a dispensing tube (30) mounted movably in the latter, with which valve it is possible to act on a closure (41), designed in the form of a closure membrane, of the inner container (12) in such a way that, upon normal actuation of the dispensing tube (30), the closure membrane (28) can be broken open and can be thrust or pressed into the inner container (12), characterized in that the closure membrane (28) is assigned an opening (26) of the inner container (12), and in that this opening (26) has means (45) for fixing the pressed-in closure membrane (28) with formation and maintenance of a fluid connection (27) between the interior of the inner container (12) and the interior of the outer container (10), the means for fixing the pressed-in closure membrane (28) being at least three longitudinal ribs (45) arranged distributed approximately evenly around the circumference, or retaining studs or the like arranged in container longitudinal direction.
