Abstract (en)
[origin: US4556089A] A weft-thread mixer device having: general control means; a rocker connected to each distribution finger; a slide and a pusher for putting the corresponding rocker positively into the active position; a slide and a pusher for putting the same rocker positively into the inactive position; thrust rods for connecting an axle of the general control means selectively to the corresponding slides for putting into the active position or for putting into the inactive position, according to one of the two possible positions of the thrust rods; and individual electromagnets controlling the position of each of the thrust rods. The invention can be used on weaving machines where it is necessary to mix the weft threads.
