Abstract (en)
There is disclosed a cup-shaped container body (1) comprising an outer hollow article (2) having a flange portion (4), the outer hollow article being formed by drawing a flexible laminate blank including a thermoplastic film to form the inner surface of the outer hollow article and a metal foil (2b), and a reinforcing inner hollow article (3) having a flange portion (5) which is received in the outer hollow article, the inner hollow article being formed by thermoforming a blank of a thermoplastic which is heatsealable to the thermoplastic film to form the inner surface, having a configuration corresponding to the outer hollow article, and being hermetically jointed to the outer hollow article by heat sealing at least along the flange portions (4, 5) thereof. The inner hollow article (11) may be formed with a concave portion (13b) having a predetermined shape on a wall portion (13b) thereof, and the outer surface of the inner hollow article is in substantial contact with the inner surface of the outer hollow article except in the concave portion.
