Abstract (en)

[origin: US4729909A] A process for production of a metal-coated paper, such as for use in cigarette packs having a metal coating containing a binding agent which is applied to a paper backing material by a printing process. The coating includes particles which have a flake structure and which can be fully wetted by the binding agent, as a result of which the particles of metal are so firmly embedded into the coating as to provide sufficient abrasion resistance to permit the resulting composite paper to be used in a high-speed automatic packaging machine. In this process for producing such a paper, a tool is pressed against and passed over the metal coating while still moist to smooth out the metal coating, whereupon the metal coating is dried.

Abstract (de)

Ein Papier mit einer abriebfesten Metallbeschichtung, insbesondere zur Verwendung als Zigaretten-Einwickel-Papier in Zigaretten-Verpackungen, wird hergestellt im Tiefdruckverfahren (2, 4) durch Beschichtung des Papiers (3) mit einer Zusammensetzung, die Blättchenstruktur aufweisende, durch das Bindemittel voll benetzbare Metallteilchen, Z.B. sogenannte "non leafing" - Metallpigmente, enthält.
