Abstract (en)

A method of processing silver halide color light-sensitive materials is disclosed, which comprises the steps of: developing an exposed silver halide color light-sensitive material, thereafter substantially washing the material with water for a period from about 5 to 90 seconds, and thereafter bleach-fixing the material using a bleach-fixing solution to which is added from about 30 ml to 120 ml replenisher solution of a bleach-fix per m<2> of said material processed, by which contamination of the light-sensitive materials and inferior recovery of color are prevented in spite of using a reduced amount of a bleach-fix replenisher solution.
