Abstract (en)

[origin: EP0132842A2] The invention relates to a construction for the articulated connection and sealing of two door or gate elements (12) pivotable relative to one another by means of band parts (1, 2, 3) and sealing profile strips (13). According to one embodiment of the invention, the sealing profile strips are anchored by means of anchoring profile extensions in grooves (11) on the narrow sides of the door or gate elements (12), the band parts (1, 2, 3) likewise being anchored in the grooves (11). According to another embodiment of the invention, in the closing position the narrow sides are at a distance (a) from one another which guarantees finger protection, and elastic sealing profile strips (13) are present on the narrow side of each of the two door or gate elements (12). <IMAGE>
