Abstract (en)

[origin: US4574601A] In a closure for a valise and the like, with hook latches on both sides of a central combination lock, the latches being displaceable by manual actuation into a release position, this displacement being locked, when the combination of the lock is not properly set, by a blocking part of the combination lock which is displaceable into the release position by spring action, a swing yoke surrounding the combination lock in U-shape and having central section and U-yoke arms with ends, each said end, respectively, having a pivot point, a manually actuatable single push key adjacent the combination lock, single push key comprising said central section of said swing yoke, angle levers, each of said angle levers having a first arm and a second arm, each said first arm forming a hook swing latch, and respectively ones of said U-yoke arms, adjacent said pivot point, operatively acting upon said second arm of a respective said angle lever.
