Abstract (en)  
[origin: EP0133286A1] 1. Foil processing machine (10) for producing, stacking and depositing flat packings of thermoplastic plastics foil such as bags or sacks, comprising a separating and welding means operating in a horizontal plane for processing the double-layered foil sheets vertically supplied thereat and a stacking means (41, 44) immediately connected to the separating and welding means, in which stacking means the packings are held hanging to form a stack, and comprising a connected depositing table (15) provided with a conveying means (66), on which depositing table the packings are deposited and then moved away, characterized in that in the area between the stacking means (41, 44) and the depositing table (15) there is arranged a reciprocating gripping device (54) gripping the stack of the packings and being movable across said depositing table for depositing said stack of packings thereon.
