Abstract (en)
[origin: EP0133293A2] 1. A two-component pack having a beaker (2) arranged in the neck (1) of the pack for receiving the one component (1) and a screw-cap (4) associated with the neck of the pack and having, projecting into the beaker, a collar (9) the front rim of which forms a ram edge (9') for severing the beaker in the region of a predetermined line of break by screwing the screw-cap up further beyond the normal position at sale, characterized in that the ram edge (9') of the collar (9) seats flush against an annular step (A) in the wall (W) of the beaker, which is arranged at a distance (y) above the bottom (2') of the beaker to form the predetermined point of break and lies below a bead (14) directed inwards, which projects from the inner face of the beaker wall (W) to come against the surface of the collar (9).
