Abstract (en)
[origin: ES8504531A1] The invention relates to a device for assembling mouldings incorporating several rabbets, which comprises a table for positioning the mouldings, slides supporting this table, rendered fast with two columns which are connected in their lower part by a base under which is mounted a jack whose rod is connected to a hammer which penetrates in a clip magazine, and in their upper part by a piece provided with a presser member located opposite the hammer. According to the invention, a clipping assembly is provided which bears the hammer and a sliding guide fast with the hammer, as well as a sensor two small columns on which the clipping assembly may slide vertically balancing means mounted on each small column below the clipping assembly and a plate disposed at the top of the rod, and on which the hammer and the sliding guide rest, and which comprises a matching member opposite the sensor. The invention is more particularly applicable to the manufacture of wooden frames.
