Abstract (en)

Lockable handle assembly for motor vehicle trunks or boots includes a manually operable handle member (14) linked to the trunk or boot latch in use; a blocking lever (24) movable to a position at which it blocks movement of the handle member; and an electric motor (28) actuatable under remote control, e.g. in common with a central locking system of the vehicle, for selective shifting of the blocking lever. Preferably a key-operated locking device (33) is also included for actuation of the blocking lever.
