Abstract (en)

A magnet strip (2) extends along one generator of a printing drum (1) of a rotary stencil printing device. A clamp strip (105), made of a material which is magnetically attractable, can be selectively positioned as lying against and along the magnet strip (2) with a leading edge of a stencil master (S) for stencil printing interposed therebetween so as to clamp the leading edge of the stencil master (S) to the printing drum (1), or removed away from the magnet strip (2) so as to release the stencil master (S). Thereby the stencil master (S) can be conveniently retained to the printing drum (1) in a manner which is suitable for automation, and does not require any reinforced lug portion along the leading edge of the stencil master (S).
