Abstract (en)  
A palletized container comprising a pallet structure P and a container secured to the pallet structure, the container comprising side walls (9, 10, 11 and 12), top closing flaps (13, 14, 15, 16), bottom flaps (17, 18, 19, 20) which fold inwardly of the container from the side walls and defining a generally rectangular opening (21) in the base of the container, two base pads each having a rectangular attachment portion (1) which is attached to the pallet structure P under the top bearers of the pallet structure P and smaller shaped pad portions (2) formed with crease or score lines (3, 4) to define a central trapezium shaped portion T and shaped foldable ears (5, 6) extending from the sides of the portion T, said ears (5, 6) being relieved at (7, 8) so that the pad portion (2) is connected to the attachment portion (1) by an arrow neck. In use, the pad portions (2) are arranged generally perpendicular to the pallet structure P and the ears (5, 6) are bent towards each other until the pad portions may be inserted through the rectangular opening (21) in the base of the container. The pad portions (2) are then folded flat against the base of the container to prevent lateral movement of the container with respect to the pallet structure P in all directions.
